Koushik Varma Mandapati – PES1UG19CS230

Kosaraju Bhargava Krishna – PES1UG19CS225

Project Title: Event Registration Management System

Problem Statement

Introduction: Various events take place in colleges and event management has always been a topic of concern. Maintaining registrations being a part of event management is always done manually. The data might not be organized properly Also, retrieving and updating registration details is difficult. Thus, our project is to simplify this task and make it more efficient.

Overview:

Our goal with this project is to simplify this task, by developing a user-friendly application. Our application will use MySQL DB to store the data and for the User interface we have proposed using HTML, CSS, Bootstrap, JSP and javascript (part of assignment 4). We will also be implementing multi user accessing the application as the user

and the admin. The user (participant) will be able to register to events with ease and the Admin (organizer) will be able to update/manage events accordingly (part of assignment 3) .

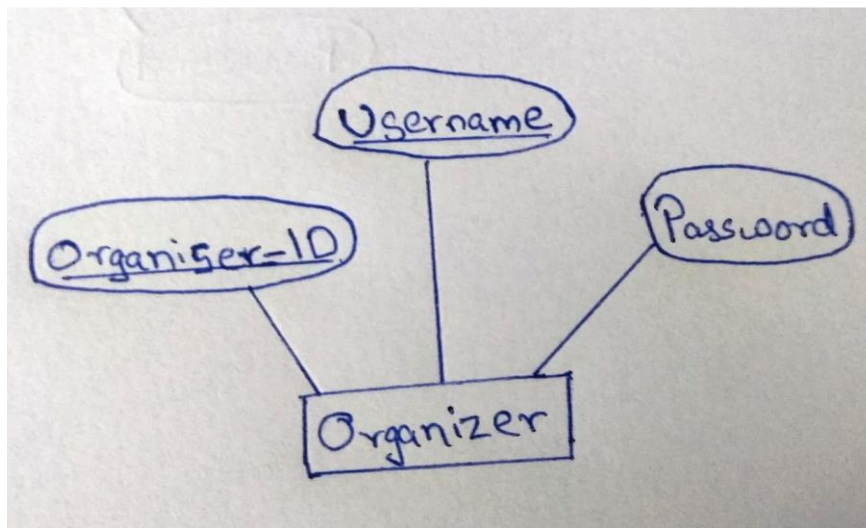

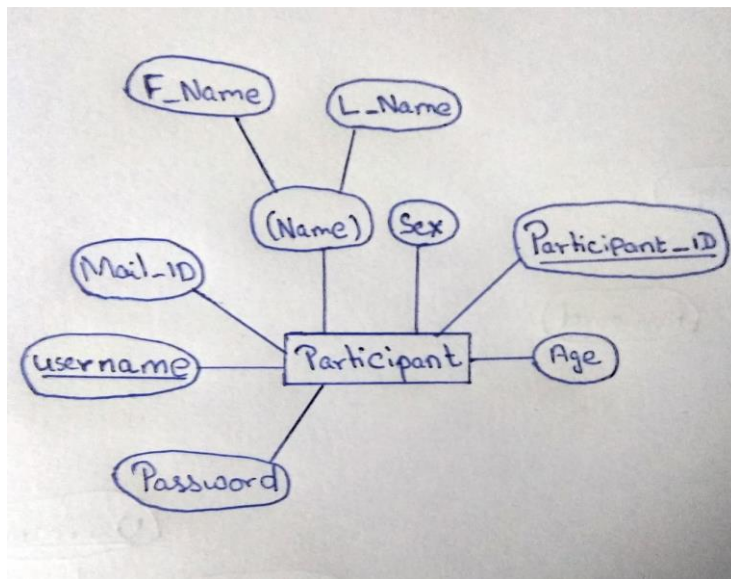

Entity Relationship Diagram:

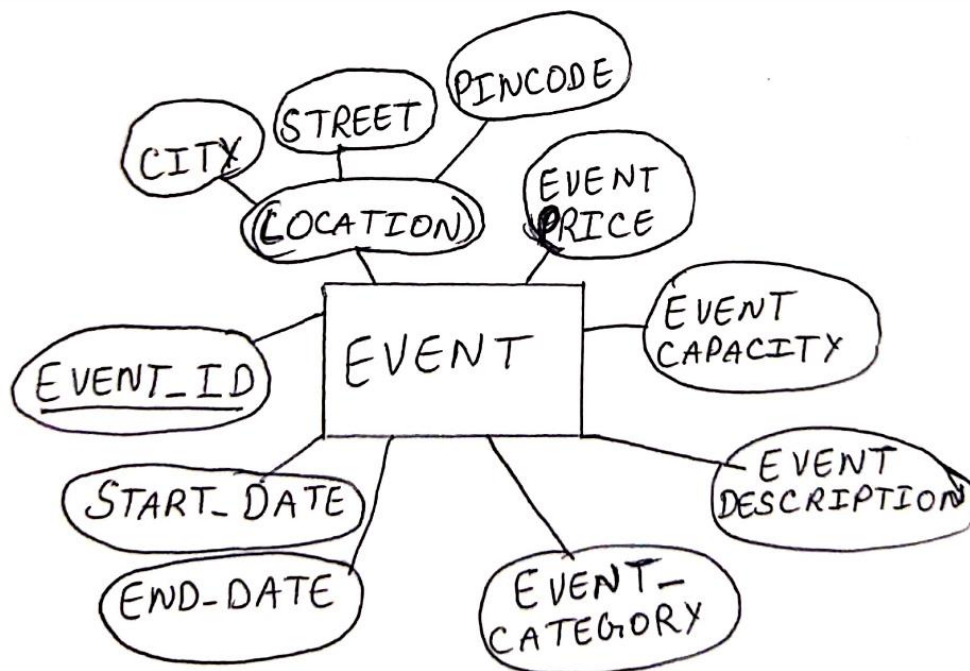

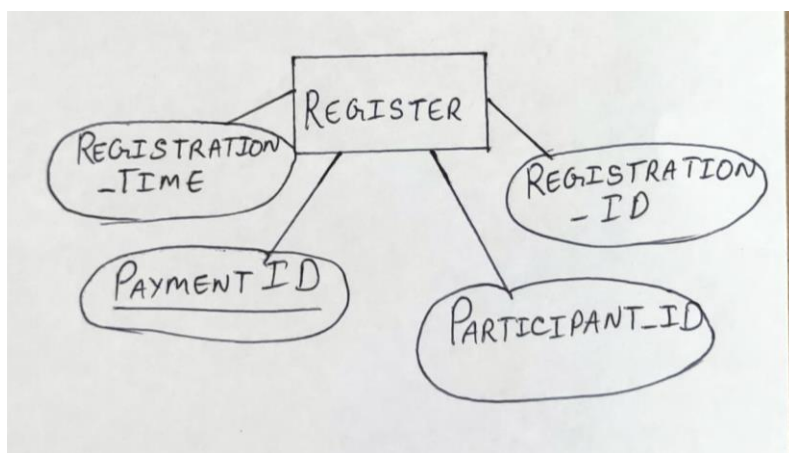

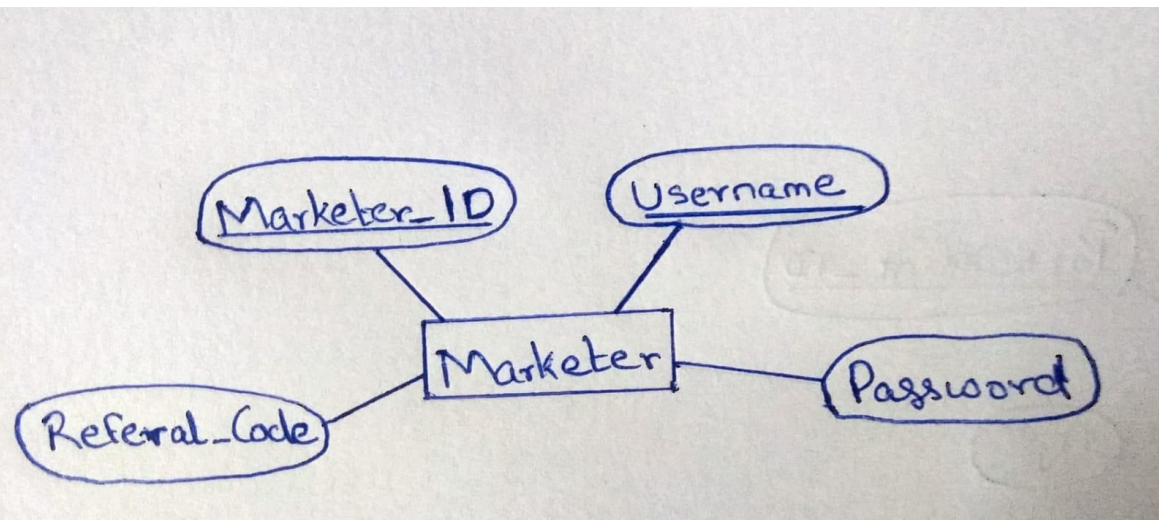

1) Preliminary Design:

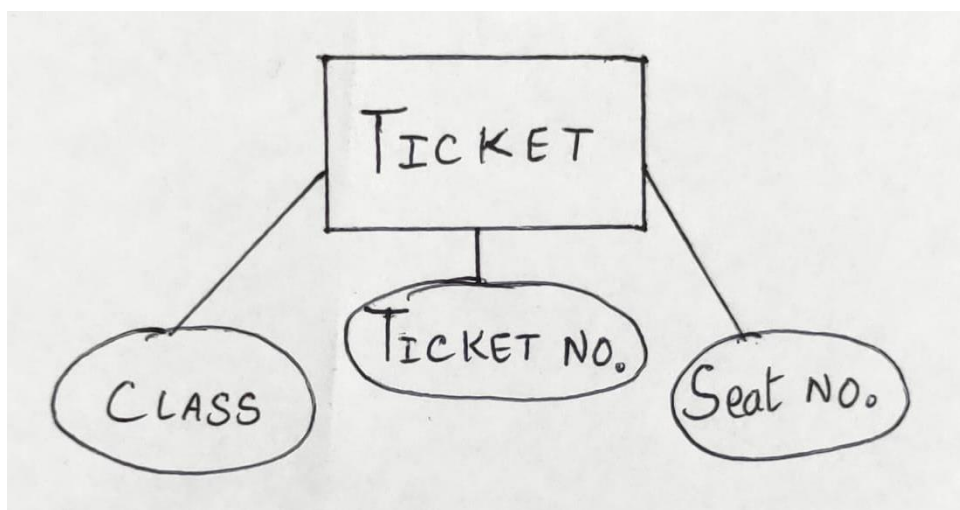

Based on the requirements, we can identify eight initial entity types in the pharmacy database:

1. Participant
2. Organizer
3. Marketer
4. Team
5. Register
6. Payment Details
7. Ticket
8. Event

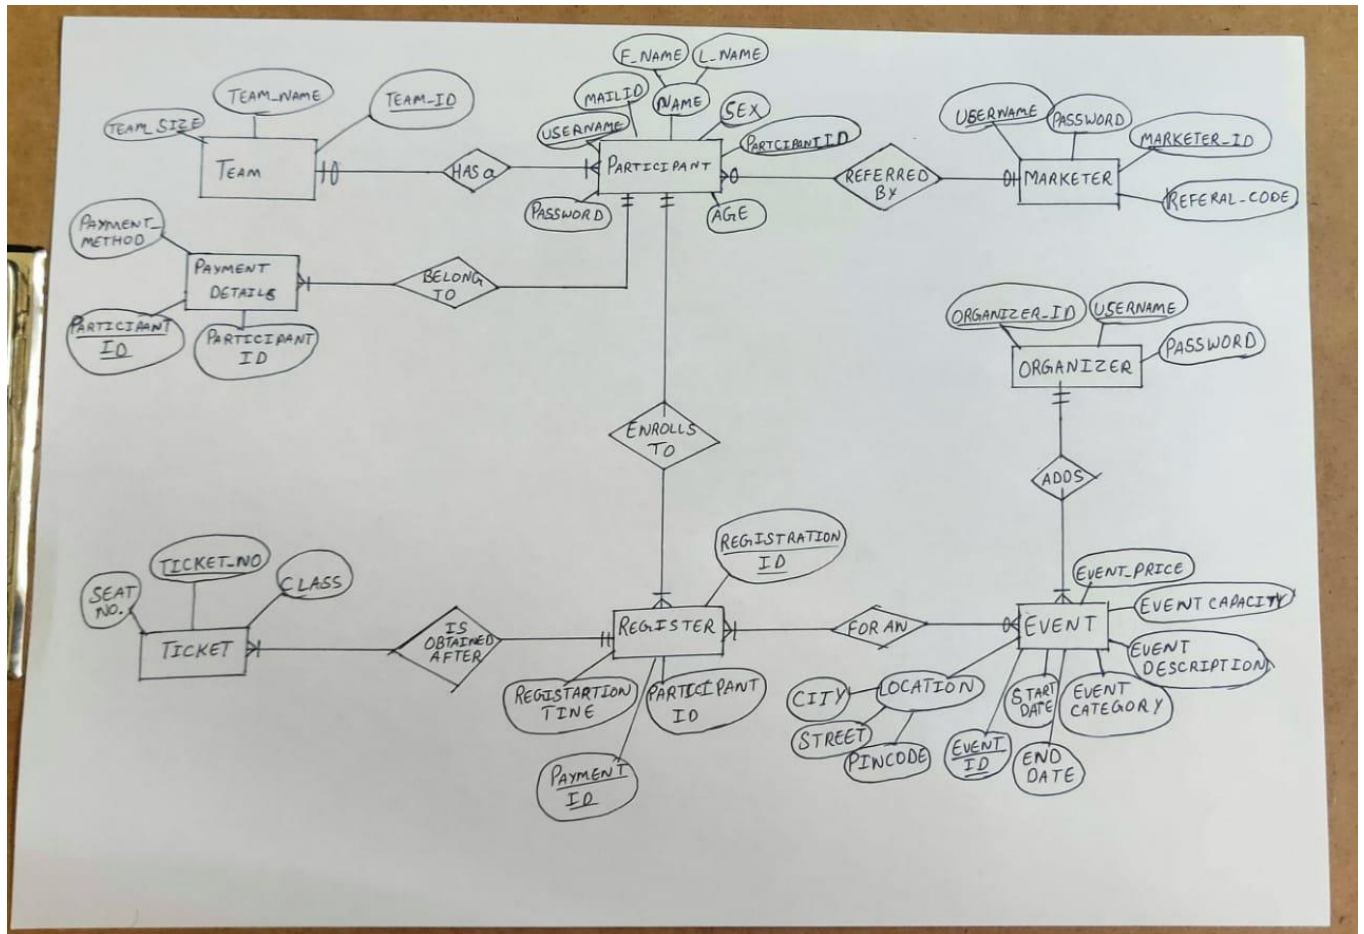

The initial attributes are derived from the requirements description and the conceptual design is shown below:

2) Final ER Diagram:

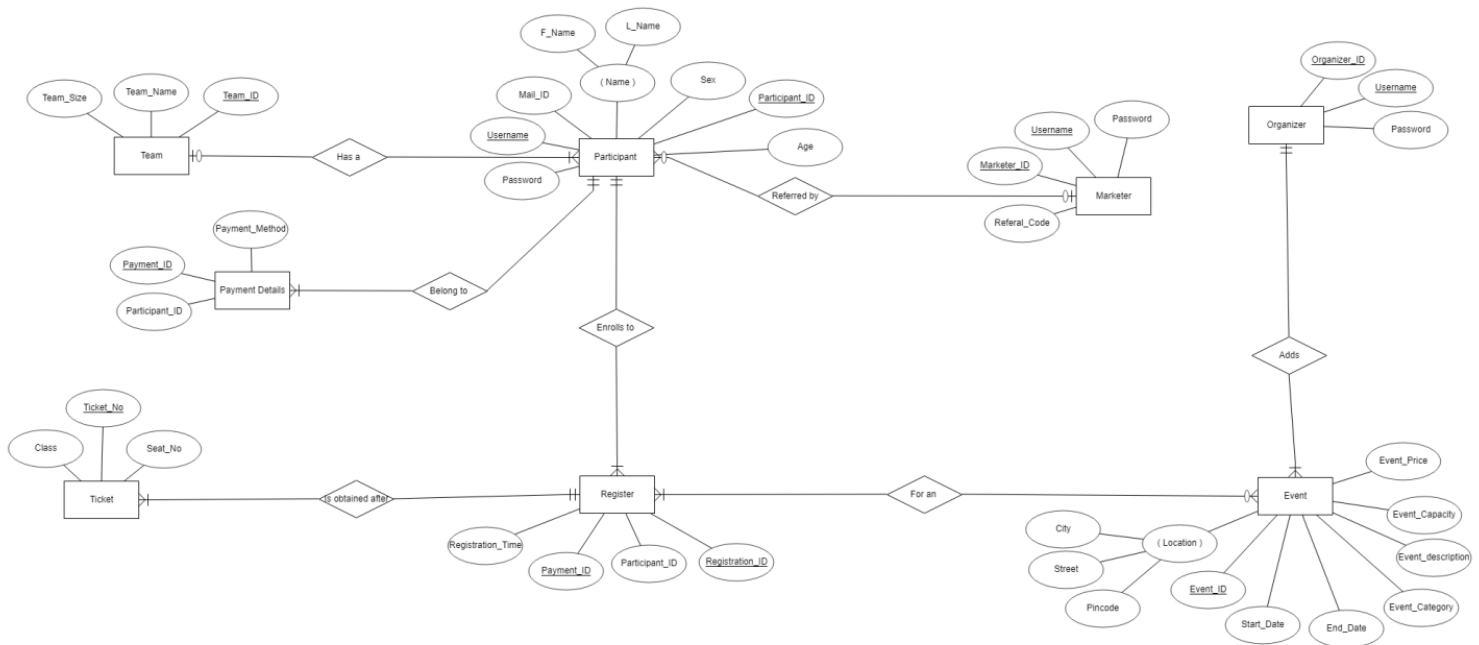

Entity Relationship Tool : ERDPlus.com **ERD**

- It is free to use and easily accessible.
- It is very easy to use this tool for producing quality ER diagrams.
- Since the tool is free to use and completely web-based, there is no installation needed.

- Easily create Relational Schemas (Relational Diagrams)
- Automatically convert ER Diagrams into Relational Schemas
- Export SQL or Export diagrams as a PNG

We can use it at <https://erdplus.com/>

Final Tool Generated ER Diagram

Individual Contributions

Assignment 1 was majorly a group task since we had to reason about the future of this group, so majority of time was spent envisioning the scalability of this project and what entities would be relevant. it took us approximately 5 hours to complete the assignment.

- K K Tarun Kumar (PES1UG19CS222) - Operating ER tool ERDPlus, Final Tool generated ER diagram
- Koushik Varma Mandapati (PES1UG19CS230) - ER diagram, Incremental stages of constraints in ER diagram.
- Kosaraju Bhargava Krishna (PES1UG19CS225)- Problem statement, Overview and Report Writeup.
